

CreateNewUserRequest  
::execute

MakeTransactionRequest  
::execute

DB::DatabaseManager  
::insert

```
graph LR; A[CreateNewUserRequest::execute] --> C[DB::DatabaseManager::insert]; B[MakeTransactionRequest::execute] --> C;
```

The diagram illustrates a sequence of operations. On the left, two white rectangular boxes represent request objects. The top box is labeled 'CreateNewUserRequest' with a sub-label '::execute'. The bottom box is labeled 'MakeTransactionRequest' with a sub-label '::execute'. On the right, a gray rectangular box represents a database manager, labeled 'DB::DatabaseManager' with a sub-label '::insert'. Two blue arrows originate from the right side of the white boxes and point towards the left side of the gray box, indicating that both request objects are calling the 'insert' method of the 'DatabaseManager'.
